

Doctoral Studies

Management 4 years

The Doctoral Programme in Management is aimed at young researchers interested in management and business challenges. Research topics include the digital transformation of organisations, the added value of artificial intelligence, the management of knowledge and intellectual capital, the characteristics of sustainable management and the circular economy, neuromarketing, consumer behaviour, the development of innovations and

the rapid growth of start-ups, especially technological start-ups. By working in research groups, KTU Management PhD students have the opportunity to deepen their knowledge of contemporary management and business theories, study the performance of organisations and ecosystems, and develop and apply knowledge and innovations in the field of management and business administration in practice.

RELEVANCE

The KTU PhD in Management stands out for its ability to adapt to constantly changing global trends, such as technological advances and challenges posed by artificial intelligence, financial crises, social and political changes, and environmental and climate change challenges. KTU management scholars are recognised in the fields of innovation and entrepreneurship, neuromarketing, Industry 4.0, digital health innovation, digital society, sustainable management, consumer behaviour and circular economy. KTU Management PhD students conduct research on challenges at the intersection of the individual and the organisation, and technology and society. By acquiring and developing specialised research skills in their chosen area of expertise, doctoral students can develop a holistic understanding and interdisciplinary insight to connect management practice with organisational theory.

CAREER OPPORTUNITIES

The PhD focuses on the development of research methodological skills, critical and entrepreneurial thinking skills, and the ability to present research findings to both academic and business management audiences. Graduates of the KTU Management Doctoral Programme become researchers and experts in the field of management who can join the activities of academic institutions, and various industrial and public sector organisations. They can participate in scientific research and international research groups. Doctoral studies provide the opportunity to participate in international research and innovation projects and to take up management positions in the private and public sectors, implementing innovative solutions and research. Graduates have the opportunity to continue their studies as trainee researchers in universities in Lithuania and other countries such as the USA, Canada, France and Germany.
